

Report No. : NEI- EMC-03102-2

Measurement Report

Issued Date	: Oct. 27, 2003
Project No.	: 03E0670
Equipment	: 24-Port 10/100/1000Mbps Gigabit Switch
Model No.	: TEG-S240TX
Applicant	: TRENDWare International Inc. 3135 Kashiwa Street Torrance, CA 90505, U.S.A.

Tested by : Neutron Engineering Inc. EMC Laboratory Data of Test : Jun. 26, 2003 ~ July 02, 2003

Testing Engineer :	Cary Chen
	(Cary Chen)
Technical Manager :	(Andy Chiu)
Authorized Signatory :	(Andy Chiu)

NEUTRON ENGINEERING INC.

No. 132-1, Lane 329, Sec. 2, Palain Rd., Shijr City, Taipei, Taiwan TEL : (02) 2646-5426 FAX : (02) 2646-6815

Report No. : NEI- EMC-03102-2

Declaration

Neutron represents to the client that testing is done in accordance with standard procedures as applicable and that test instruments used has been calibrated with the standards traceable to National Measurement Laboratory (NML) of R.O.C., or National Institute of Standards and Technology (NIST) of U.S.A.

Neutron's reports apply only to the specific samples tested under conditions. It is manufacture's responsibility to ensure that additional production units of this model are manufactured with the identical electrical and mechanical components. **Neutron** shall have no liability for any declarations , inferences or generalizations drawn by the client or others from **Neutron** issued reports.

Neutron's reports must not be used by the client to claim product endorsement by the authorities or any agency of the Government.

This report is the confidential property of the client. As a mutual protection to the clients, the public and **Neutron-self**, extracts from the test report shall not be reproduced except in full with **Neutron**'s authorized written approval.

Neutron's laboratory quality assurance procedures are in compliance with the **ISO Guide 17025** requirements, and accredited by the conformity assessment authorities listed in this test report.

Limitation

For the use of the authority's logo is limited unless the Test Standard(s)/Scope(s)/Item(s) mentioned in this test report is (are) included in the conformity assessment authorities acceptance respective.

Report No. : NEI- EMC-03102-2

1. General Information

1.1 Applicant

NameTRENDWare International Inc.Address3135 Kashiwa Street Torrance, CA 90505, U.S.A.

1.2 Manufacturer

Name N/A Address N/A

1.3 Equipment Under Tested

Name: 24-Port 10/100/1000Mbps Gigabit Switch Trade Name: TRENDWare Model No.: TEG-S240TX

1.4 OEM Brand/Model (if applicable)

OEM Brand(s)/Model(s) except the basic model in sub-clause 1.3 is(are) the follows: OEM Brand: N/A Model No.: N/A

1.5 Product Descriptions(Application/Features/Specification)

The EUT is a 24-Port 10/100/1000Mbps Gigabit Switch. Based on the application, features, or specification exhibited in User's Manual, the EUT is considered as an ITE/Computing Device. More details of EUT technical specification, please refer to the User's Manual

1.6 Connecting I/O Port(s)

24 Ports RJ 45 8P8C

1.7 Power Supplied

Power Source:	AC Mains.
Power Cord:	Detachable, non-shielded type.
Power Rating:	AC I/P 100-240Vac, 50-60Hz/DC O/P 5Vdc, 8A

1.8 Products Covered (if applicable)

The sample tested including the following sub-system/module/accessory :

Sub-system/ Module/ Accessory	Model/Type No.	Int. Inst./ Ext. Cont.
Power Supply	SA40-050100 (LEI)	Int. Inst
Power Supply	UP0401S-05L1 (UMEC)	Int. Inst

1.9 Model Difference (Series, Versions, if any) Except the basic model no. (model designation of the sample tested in this test report), additional model no. covered is(are) :

N/A

1.10 EUT Modifications (if applicable)

No any modification required for the EUT to comply with the standards. Please refer to the Attachment – ${\bf A}$

1.11 Photos of EUT

Please refer to the Attachment – C.

2. RFI Emissions Measurement

2.1Test Facility

The test facilities used to collect the test data in this report is OS02 at the location of No.132-1, Lane 329, Sec. 2, Palain Road, Shijr City, Taipei, Taiwan.

2.2 Standard Compliance

The test data contained in this report relate only to the item(s) listed below : Limitation Class A CISPR 22 :1997/EN 55022 : 1998+A1:2000

2.3 Test Methodology

Both conducted and radiated testing were performed during the max. EMI emission evaluation.

Antenna to EUT distance is 10 m.

Test procedures according to the technical standards: CISPR 22 :1997+A1:2000 / EN 55022 : 1998+A1:2000

2.4 Deviations from Standard Test Method

N/A

2.5 Sample(s) Tested

The representative sample tested in this reports is(are): TEG-S240TX Test results in this test report relate only to the sample(s) tested.

The EUT has been tested according to the following environmental condition:

Input Power	230 Vac/50Hz
Temperature	29
Relative Humidity	59 %

2.6 Measurement Instruments

Valid measurement instruments used in this report refer to **Table-1** enclosed.

2.7 Measurement Uncertainty

The reported uncertainty of measurement $y \pm U$, where expended uncertainty U is based on a standard uncertainty multiplied by a coverage factor of k=2, providing a level of confidence of approximately 95 %.

- A. Conducted Measurement :5.05dB
- B. Radiated Measurement :

Test Site	Method	Measurement Frequency Range	Ant. H / V U , (dB)		NOTE
OS-01	ANSI	30MHz ~ 200MHz	Н	4.59	
		30MHz ~ 200MHz	V	4.80	
		200MHz ~ 1,000MHz	Н	4.47

		30MHz ~ 200MHz V 5.15		5.15	
	200MHz ~ 1,000MHz		Н	5.28	
	200MHz ~ 1,000MHz		V	4.53	
OS-02	OS-02 VCCI 30MHz ~ 200MHz		Н	4.34	Only for VCCI Report
	30MHz ~ 200MHz		V	4.77	Only for VCCI Report
		200MHz ~ 1,000MHz	H	4.91	Only for VCCI Report
		200MHz ~ 1,000MHz	V	4.53	Only for VCCI Report

2.8 Tested System Set-Up/Configuration Details

The system was configured for testing in a typical fashion (as a user would normally use) or in-accordance with the operating configuration specified in the user's manual. A Block Diagram(please refer to the Diagram - 1) and Photos(please refer to the attachment - B) showing the set-up/configuration of system tested. In addition, **Table-2** and **Table-3** provide a detail of all equipment items and cables information used in the system tested.

 Table - 2
 Equipments Used in Tested System

Report No. : NEI- EMC-03102-2

Note:

- Unless otherwise denoted as EUT in ^rRemark_a column , device(s) used in tested system is a support equipment.
- (2) Unless otherwise marked as in ^rRemark_a column, Neutron consigns the support equipment to the tested system.
- (3) The support equipment was authorized by Declaration of Confirmation.

Table - 3 Information of Interface Cable

ltem	Shielded Type	Ferrite Core	Length	Note
C-1	YES	YES	1.8M	
C-2	YES	NO	1.8M	
C-3	YES	NO	1.5M	
C-4	YES	NO	1.5M	
C-5	YES	NO	1.5M	
C-6	NO	NO	2M	
C-7	NO	NO	1.2M	

Note:

- (1) Unless otherwise marked as in [®]Remark_a column, Neutron consigns the support equipment to the tested system.
- (2) For detachable type I/O cable should be specified the length in cm in $\[\]$ Length $\[\]$ column.

2.9 Max.(Worst Case) RF Emission Evaluation

- (a) Both conducted and radiated testing were performed during the max. EMI emission evaluation.
- (b) The system was configured for testing in a typical fashion (as a customer would normally use it). The EUT was connected to support equipment-personal computer. Peripherals of PC, such as monitor, keyboard, modem and printer were contained in this system in order to comply with the CISPR22 (1997) Rules requirement. The PC operated in the default 640 x 480 / 31.5 KHz VGA Graphic mode. This operating condition was tested and used to collect the included data.
- (c) To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.
 - Mode 1 10 Mbps (Power Supply: SA40-050100)
 - Mode 2 100 Mbps (power supply: SA40-05100)

Mode 3 1000 Mbps (power supply: SA40-05100)

Mode 4 10 Mbps (power supply: UP0401S-05L1)

Mode 5 100 Mbps (power supply: UP0401S-05L1)

Mode 6 1000 Mbps (power supply: UP0401S-05L1)

The EUT system operated Mode 2, 3, 5, and 6, mentioned above was found to be the worst case during the pre-scanning test.

These operation modes were used for final testing and collecting test data included in this report.

2.10 EUT Operation

The EUT exercise program used during radiated and/or conducted emission measurement was designed to exercise the various system components in a manner similar to a typical use. The program contained on a PC hard disk and is auto-starting on power-up. Once loaded, the program sequentially exercises each system component in turn. The sequence used is:

- 1. Read (write) from (to) mass storage device (Disk).
- 2. Send "H" pattern to video port device (Monitor).
- 3. Send " H " pattern to parallel port device (Printer).
- 4. Send " H " pattern to serial port device (Modem).
- 5. EUT send/receive data to/from PC server (EUT PC).
- 6. Repeated from 2 to 5 continuously.

As the keyboard and mouse are strictly input devices, no data is transmitted to (from) them during test. They are, however, continuously scanned for data input activity.

3. Justification

3.1 Limitations

3.1.1 Power Line Conducted Emission (Frequency Range 150KHz-30MHz)

Measurement	Mains Terminal		Mains Te	Note	
Frequency	Class A	Limits	Class B	Limits	CISPR
Range	(dB	uV)	(dBu	uV)	FCC
(MHz)	QP Mode	AV Mode	QP Mode	AV Mode	Std.
0.15 - 0.50	79.00	66.00	66 - 56 *	56 - 46 *	CISPR
0.50 - 5.00	73.00	60.00	56.00	46.00	CISPR
5.00 - 30.0	73.00	60.00	60.00	50.00	CISPR
0.45-1.705	60.00	N/A	48.00	N/A	FCC
1.705-30.0	69.50	N/A	48.00	N/A	FCC

Notes:

- (1). The tighter limit applies at the band edges.
- (2). The limit of " * " marked band means the limitation decreases linearly with the logarithm of the frequency in the range.

3.1.2 Radiated Emission Limits (Frequency Range 30MHz-1000MHz)

Measurement	Quasi-Pe	eak Mode	Quasi-Pe	eak Mode	Note
Frequency	Class A Limits		Class E	3 Limits	CISPR
Range	(dBu	(dBuV/m)		V/m)	FCC
(MHz)	10m	30m	10m	3m	Std.
30.00 -230.00	40.00	30.00	30.00	40.00	CISPR
230.0 -1000.0	47.00	37.00	37.00	47.00	CISPR
30.00 - 88.00	39.00	N/A	30.00	40.00	FCC
88.00 - 216.0	43.50	N/A	33.50	43.50	FCC
216.0 -960.0	46.00	N/A	36.00	46.00	FCC
above 960.0	49.50	N/A	46.00	54.00	FCC

Notes:

- (1). The tighter limit applies at the band edges.
- (2). Emission level (dBuV/m)=20log Emission level (uV/m).
- (3). A measuring distance 0f 10m is a primary used. However, either 3m or 10m (instead of 10m) distance my be allowed. If the distance is 3m, add 10dB to the QP-limit above. If the distance is 10m, subtract 10dB from the QP-limit above.

Report No. : NEI- EMC-03102-2

3.2 Measurement Justification

3.2.1 Conducted Emission

The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and these signals are then Quasi Peak detector mode and Average detector mode re-measured.

Data of **Table - 4**. lists the significant emission frequencies, measured levels, limits and safe margins. All readings are Peak Mode measured unless otherwise stated as QP or AV in column of "Remark ".

If the Peak Mode measured value lower than both QP Mode and AV Mode Limit, EUT shall be deemed to compliance with both QP & AV Limits and then no additional QP Mode or AV Mode measurement performed.

If additional QP or AV Mode measurement needed, and if the QP Mode measured value compliance with the QP Mode Limit and lower than AV Mode Limit, the EUT shall be deemed to meet both QP & AV Limits and then only QP Mode was measured, but AV Mode was not performed.

3.2.2 Radiated Emission

The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.

Data of **Table - 5**. lists the significant emission frequencies, measured levels, limits and safe margins. All readings are Peak Mode measured unless otherwise stated as QP in column of " Remark ".

If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed.

3.3 Measurement Data

- Table 4. Conducted Emission Data
- Table 5. Radiated Emission Data

Special Notes : (EUT Operation Mode or Test Configuration Mode, if applicable)

Mode 2

Judgement : Passed by17.53 dB at11.38 MHz AVGX _ QP Line _X

4.2 General Performance Criteria

According to EN55024:1998+A1:2001 standard, the general performance criteria as following:

Criterion A	The equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
Criterion B	After the test, the equipment shall continue to operate as intended without operator Intervention. No degradation of performance or loss of function is allowed, after the application of the phenomenon below a performance level specified by the manufacturer, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is allowed. However, no change of operating state if stored data allowed to persist after the test. If the minimum performance level (or the permissible performance loss) is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
Criterion C	Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer' s instructions. Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

Report No. : NEI- EMC-03102-2

4.3 Sample(s) Tested

The representative sample tested in this report is the same as the statements of **2.5** unless otherwise a special model no. is specified in the record (Table of Test Results). The EUT has been tested according to the following environmental conditions:

Tested items: EN 61000-3-2 / 3 , EN 61000-4-3 / 4 / 5 / 6 / 8 / 11

Input Power	230 Vac/50Hz			
Temperature	27			
Relative Humidity	59 %			
Tested items: EN 61000-4-2				
Input Power	230 Vac/50Hz			
Temperature	26			
Relative Humidity	56 %			

4.4 EUT Operating Condition

The EUT tested system was configured as the statements of **2.10** Unless otherwise a special operating condition is specified in the follows during the testing.

4.5 EUT Tested Results

4.6 Test Set-Up

The configuration of testing system is described as the block diagram which shown in Fig. 4-6-1,4-6-2,4-6-3,4-6-4,4-6-5,4-6-7,4-6-8 of test set-up configuration.

4.7 Measurement Instruments

Valid measurement instruments used in this report refer to Table- 13 enclosed.

Fig. 4-6-1 ESD Test Set-Up Configuration

Fig. 4-6-2 EFT Test Set-Up Configuration for Power Supply Ports

Remark :

If the manufacturer provides a non-detachable power cord more than 1m long with the EUT, the excess length of this power cord shall be folded back and forth forming a bundle 30-40 cm long and situated at a distance of 10 cm above the reference ground plane(GRP).

Report No. : NEI- EMC-03102-2

5.1.2 Limits of Fluctuation and Flicker

5.2 Test Methodology

5.2.1 Harmonic Current Test

Tests was performed according to the procedures specified in **Clause 5.0 of IEC555-2** and/or Sub-clause **6.2 of IEC 61000-3-2** depend on which standard adopted for compliance measurement.

5.2.2 Fluctuation and Flickers Test

Tests was performed according to the Test Conditions/Assessment of Voltage Fluctu-ations specified in Clause 5.0/6.0 of IEC555-3 and/or Clause 6.0/4.0 of IEC 61000-3-3 depend on which standard adopted for compliance measurement.

All types of harmonic current and/or voltage fluctuation in this report are assessed by direct measurement using flicker-meter, which compliance with the specification given in IEC868, connected as the test set-up configuration described in **Section 6**.

5.3 Sample(s) Tested

The representative sample tested in this reports is the same as the statements of **2.5** unless otherwise a special model no. is specified in the record (Table of Test Results).

5.4 Test Set-Up Configuration

The test set-up configuration, including the auxiliary instruments, is sketched as block diagram of **Fig. 6-4-1** in next page.

5.5 EUT Operating Condition

The EUT tested system was configured as the statements of **2.10** unless otherwise a special operating condition is specified in the follows during the testing.

Relative Humidity(%):	70.0 % RH	Watts(w):	11.89829w
Test Result	Pass	Frequency(Hz):	49.999Hz
Special Note:	N/A	Power Factor:	0.455

Datas Measured				
Test Item	Std Limits	Test Reading	Test Result	
Relative st-st Voltage Change (dc)	3 %	0.01 %	PASS	
Max. Relative Voltage Change(d _{max})	4 %	2.29 %	PASS	
Duration > 3% dV(d(t) for > 200ms)	0.2 Sec.	0.05 %	PASS	
Short Term Flicker (Pst)	1.00	0.69	PASS	
Long Term Flicker (Plt)	0.65	N/A	N/A	

Report No. : NEI- EMC-03102-2

Table 15 Voltage Fluctuations/Flickers Testing

Kind of Product	Power Supply	Model No.:	UP0401S-05L1/100M
Product Category:	N/A	Test Condition (AC Input)	
AC Mains Rating	230V, 50Hz, 1 ∅	Voltage(V) :	230.7V
Temperature():	26.0	Current(mA):	116.9mA
Relative Humidity(%):	70.0 % RH	Watts(w):	13.07786w
Test Result	Pass	Frequency(Hz):	49.999Hz
Special Note:	N/A	Power Factor:	0.455

Datas Measured				
Test Item	Std Limits	Test Reading	Test Result	
Relative st-st Voltage Change (dc)	3 %	0.01 %	PASS	
Max. Relative Voltage Change(d _{max})	4 %	2.29 %	PASS	
Duration > 3% dV(d(t) for > 200ms)	0.2 Sec.	0.05 %	PASS	
Short Term Flicker (Pst)	1.00	0.69	PASS	
Long Term Flicker (Plt)	0.65	N/A	N/A

Attachment - A.

EUT Modification Description

No any modification required for the EUT to comply with the standards.

Attachment - B.

EUT Test Photos

- 1. Conducted Measurement Photos
- 2. Radiated Measurement Photos

Report No. : NEI- EMC-03102-2

Conducted Measurement Photos

Report No. : NEI- EMC-03102-2
