### Troubleshooting

#### Q1: Windows is unable to recognize my hardware. What should I do?

A1: First, verify that your computer meets the system requirements as specified in Section 1. Second, go to Start > Control Panel > Hardware > Device Manager. In the list of device types, double-click on Network Adapters. If you see the device with a yellow question mark or exclamation point next to it, double-click on it, click on Drivers and click Update Drivers. Follow the Hardware Update Wizard instructions as illustrated in Section 2. Third, if the device manager fails to recognize the presence of a new networking adapter, verify that the network adapter is firmly seated in the PC CardBus slot. Fourth, install the adapter into another available PC CardBus slot

# Q2: Windows recognizes my new hardware, but I'm unable to connect to my network. What should I do?

A2: First, verify that the RJ-45 Ethernet Cable is securely connected from your switch or router to your network adapter. Second, verify that the LEDs on your network card are lit. Third, verify that the TCP/IP settings are set to **Obtain an IP address automatically**.

# Q3: When I connect the adapter to a gigabit switch, I am not getting gigabit speeds. What should I do?

A3: Make sure you are using CAT-5e or CAT-6 Ethernet Cables. Some CAT-5 cables are not rated to run in Gigabit.

If you still encounter problems or have any questions regarding the TEG-PCBUSR, please refer to the User's Guide included on the Driver CD-ROM or contact TRENDnet's Technical Support Department.

#### Certifications

This equipment has been tested and found to comply with FCC and CE Rules. Operation is subject to the following two conditions:
