**Q1: Windows is unable to recognize my hardware. What should I do?**

**A1:** First, verify that your computer meets the system requirements as specified in **Section 1**. Second, go to **Start -> Control Panel -> System -> Hardware > Device Manager**. In the list of device types, double-click on **Network Adapters**. If you see the device with a yellow question mark or exclamation point next to it, double-click on it, click on **Drivers** and click **Update Drivers**. Follow the Hardware Update Wizard instructions as illustrated in **Section 2**. Third, if the device manager fails to recognize the presence of a new network adapter, verify that the network adapter is firmly seated in the PCI Slot.

**Q2: Windows recognizes my new hardware, but I'm unable to connect to my network. What should I do?**

**A2:** First, verify that the RJ-45 Ethernet Cable is securely connected from your switch or router to your network adapter. Second, verify that the LEDs on your network card are lit. Third, verify that the TCP/IP settings are set to **Obtain an IP address automatically**.

**Q3: How do I install the drivers on Windows 98 or ME?**

**A3:** Please refer to the User's Guide included on the Driver CD-ROM.

**Q4: Why am I only getting a network connection speed of 100Mbps instead of 1000Mbps?**

**A4:** First, check the Ethernet Cable. Make sure you are using CAT-5e or CAT-6 Ethernet Cables. Some CAT-5 cables are not rated to run in Gigabit. Second, check the switch to make sure it is a 1000Mbps switch.
