1. Before You Start

Package Content

- TEW-630APB
- Quick Installation Guide
- User's Guide CD-ROM
- 1 x 4dBi Detachable Antenna
- AC Power Adapter (5V DC, 2.5A)
- 1 x RJ-45 Ethernet Cable

Installation Requirements

- A web browser such as Internet Explorer (5.5 or higher)
- A computer with a network adapter properly installed.
- A network Switch or Hub with an available network LAN port.
- A RJ-45 network cable.

Application

300Mbps Wireless N-Draft Access Point (TEW-630APB)

..... 300Mbps, share multimedia throughout the house

2. Install Hardware

Note: Locate an optimum location for the Access Point. The best place for the Access Point is usually at the center of your wireless network. Please connect the computer configuring the TEW-630APB to the same switch/hub.

1. Connect a RJ-45 cable from the Switch/Hub to the **LAN** port of the Access Point and then connect the 4dBi Detachable Antenna.

2. Connect the AC Power Adapter to the Access Point and then to a power outlet.

3. Verify that the following front panel lights are on: **Power, LAN** and **WLAN**.

3. Configure the Access Point

Note: It is recommended that you configure the Access Point from a wired computer. Before the Access Point can be configured, a Static IP address must be assigned to your computer's network adapter in the subnet of 192.168.1.x. Since the Access Point's default IP address is 192.168.1.100, make sure no other network devices are assigned an IP address of 192.168.1.100. (Refer to the Troubleshooting section on how to configure TCP/IP settings on your PC)

1. Open your web browser, type **http://192.168.1.100** in the Address bar, and press **Enter**.

2. Enter User name and Password, and then click **Log in**.
User name: **admin**
By default, there is no password.

3. Click **Launch Wireless Setup Wizard**.

4. Click **Next**.

5. Click **Next**.

Note: The example below is for WPA security. If you select Best (WPA2) or Better (WPA), make sure your wireless adapters support WPA2 or WPA. If your wireless adapters do not support WPA2 or WPA, then select Good (WEP).

6. Select the desired level of security and then click **Next**.

7. If you have enabled security, type in any password and then click **Next**.

8. A **Pre-Shared Key** will automatically generate. Take note of this key and then click **Save**.

9. Click **Reboot the Device**.

10. Click **OK**.

Note: If you enabled any level of security (Best, Better, Good), you need to make sure to enter the Pre-Shared key in your wireless adapter's configuration.

Your installation is now complete.

For detailed information regarding the TEW-630APB's configuration and advanced settings, please refer to the Troubleshooting section, User's Guide CD-ROM, or Trendnet's website at <http://www.trendnet.com>.

Q1: How do I configure TCP/IP settings on my computer?

1. Go into the **Control Panel** and double-click the **Network Connections** icon, right-click the **Local Area Connection** icon and then click **Properties**.

2. Click **Internet Protocol (TCP/IP)** and then click **Properties**. Then click on **Use the following IP address**, and make sure you assign your network adapter an IP address in the subnet of 192.168.1.x.

Q2: I typed http://192.168.1.100 in my Internet Browser's Address Bar, but an error message says "The page cannot be displayed". How can I get into the TEW-630APB's web configuration page?

A2: First, check your hardware settings again by following the instructions in section 2. Second, make sure the LAN and WLAN lights are lit. Third, make sure the TCP/IP settings are configured properly (see Q1). Fourth, since the Access Point's default IP address is 192.168.1.100, make sure that no other network devices are assigned an IP address of 192.168.1.100.

Q3: If my network's IP is different than the Access Point's range, what should I do?

A3: You should still configure the Access Point first. After all the settings are applied, go to the Access Point's configuration page, click **Basic** -> **Network Settings**, change the IP address of the Access Point to match your network's IP and save the settings.

Q4: After I successfully configured the Access Point to meet my network settings, I can not connect to my network using wireless computers.

A4: If you have a DHCP server in your network, you need to go into TCP/IP settings again and re-select "Obtain an IP address automatically" to allow the PC to regain an IP address from your DHCP server.

Q5: All the settings are correct, but I can not make a wireless connection to the Access Point.

A5: First, double check that the WLAN light on the Access Point is lit. Second, power cycle the Access Point by unplugging the power to the Access Point. Wait 15 seconds, then plug the power back in. Third, contact the manufacturer of your wireless network adapter. Make sure the wireless network adapter is configured with the proper SSID. The default SSID of the Access Point is **TRENDnet**.

If you still encounter problems or have any questions regarding the **TEW-630APB**, please contact TRENDnet's Technical Support Department.

Certifications

This equipment has been tested and found to comply with FCC and CE Rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference.
- (2) This device must accept any interference received.
Including interference that may cause undesired operation.

Waste electrical and electronic products must not be disposed of with household waste. Please recycle where facilities exist. Check with your Local Authority or Retailer for recycling advice.

NOTE: THE MANUFACTURER IS NOT RESPONSIBLE FOR ANY RADIO OR TV INTERFERENCE CAUSED BY UNAUTHORIZED MODIFICATIONS TO THIS EQUIPMENT. SUCH MODIFICATIONS COULD VOID THE USER'S AUTHORITY TO OPERATE THE EQUIPMENT.
