Troubleshooting

Q1: Where is the AC adapter? I did not find one in the box.
    A1: The TK-205 does not require an AC adapter. It draws power from your computer's keyboard port. As long as your KVM switch is connected to the keyboard port, it will receive the necessary power to function.

Q2: I have the KVM switch connected properly, but my keyboard and mouse don't work.
    A2: Please make sure your PS/2 ports are working properly by testing it with another mouse or keyboard. Once you confirm that the PS/2 ports are functional, please reboot your computers, and try to use the KVM switch again.

Q3: Can I connect or disconnect the KVM cables while the computers are turned on?
    A3: Yes, you can connect or disconnect the KVM cables while the computers are turned on, because the interface is Hot-Pluggable.

Q4: Will the KVM switch remember the keyboard settings between computers?
    A4: Yes, the KVM switch will remember the keyboard settings when switching between your computers. (i.e.: Caps lock, Num key, etc.)

Q5: How do I switch from one computer to another with the KVM switch?
    A5: Because the TK-205 KVM switch supports Hot-Key commands, you can use Hot-Key commands to switch between 2 computers.
