# TK-205i
2-port Super Mini Desktop KVM Switch
w/ built-in 1.1Meters Cables
Quick Installation Guide

Thank you for purchasing the **TK-205i Super Mini Desktop KVM Switch**. With this reliable and quality product, users can enjoy countless benefits from using it.

Introduction

The **TK-205i Super Mini Desktop KVM Switch** is a 2-port PS/2 type KVM Switch that comes with two built-in 1.1Meters cables. It allows users to access, control, boot and reboot two computers using only one keyboard, monitor and mouse.

Its one-piece design of KVM Switch and its built-in cables offer portability and convenience for KVM Switch users.

Though, compact and integrated in one-piece, you can expect every functions of a decent KVM Switch from TK-205i. It is your best desktop partner for KVM switching in the office or at home.

Before you begin…

The default settings of the **TK-205i KVM Switch** are appropriate for most systems. In fact, you do not need to configure the KVM Switch before the installation. The KVM Switch is a plug-and-play device; just connect keyboard,

---

monitor, and mouse to the KVM Switch, connect the KVM cables to the computers' keyboard, video, and mouse connectors, boot up the computers one at a time, wait for the computers to boot up completely, and you can start to switch between the two computers.

For a quick start on installation and operation, please follow the instructions below.

The **correct boot up sequence** is ......
(1) **Connect at least one computer and one set of the keyboard, monitor, and mouse to the KVM switch first**.
(2) **Power up your connected computer.**
    Since the KVM Switch receives power from the computer's PS/2 interface, power up the computer will turn on the KVM Switch.

Step-by-Step Installation

Take the Super Mini Desktop KVM Switch out of the box and begin with the installation....

Before connecting any cable to your KVM Switch, please make sure the computers and their peripherals are powered off. Otherwise, the KVM Switch might not power up properly.
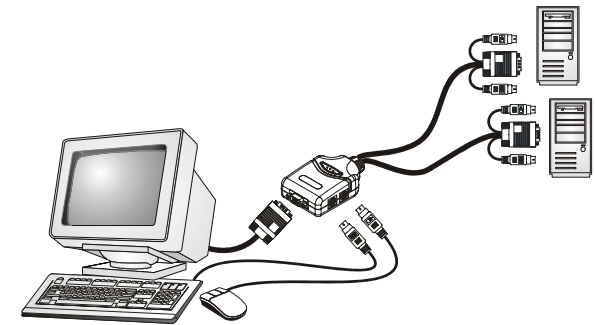

Step 1. Power off the computers and their peripherals and disconnect their power cords.

Step 2. Connect the shared keyboard, monitor and mouse to the keyboard, monitor, and mouse ports on the KVM switch.

Step 3. Connect each set of the built-in KVM cable to the computer's keyboard, video and mouse ports. You can use individual standard keyboard, mouse and video cables to extend the cable distance, but depends on the type of the cables you use, the maximum cable distance is limited to 5 ~ 7 meters (16.5 ~ 23 feet).

Note: if you are only connecting one computer to the KVM Switch, you can use either set of the cables.

Step 4. Connect the computers and their peripherals' power cords and power them up. After the computer is powered up, the KVM Switch will automatically recognize the keyboard, video and mouse and you can start operating the KVM Switch.

DO NOT connect the KVM cable to a computer that is still power-on. The computer will have difficulty recognizing the shared keyboard and mouse.

Easy Operation

There are two methods to select a specific computer: using the *front-panel push button (select) or hot-key commands.*

Front-Panel Push Button

The front-panel push button lets you have direct control over channel switching. Simply press the button to select the computer. *See **Quick Reference Sheet***
The LEDs above the push button indicate which computer is selected (PC1 or PC2).

Hot-Key Commands

A keyboard hot-key command consists of at least three keystrokes: *See **Quick Reference Sheet***

Hot-key command = ScrLk , ScrLk , *Command key(s)*

After pressing the first ScrLk key, you have 2 seconds to press the next ScrLk key and then another 2 seconds to press the command key. If you do not press the key within 2 seconds, the hot-key mode is cancelled.

For detailed Hot-Key commands and their corresponding functions, please refer to the Quick reference sheet.

Quick Reference Sheet
